CS480 Software Engineering
Assignment 1 - Build Your Team

Due Date
Tuesday before class, September 26, 2016

Score
5

Questions and Directions

Your first assignment 1 is to form your project team with your classmates and be prepared for the project.

1. Form Your Team

Each team should have **4-5** members. Please chat with your classmates and form your team as soon as possible. The earlier you can form the team, the earlier you can start the next step and move forward. The project is NOT an easy task. You will need to decide and design the project idea, learn a number of new tools and techniques, write code, manage the development cycles, and a lot more… Be prepared for a busy course, but eventually you will learn A LOT.

If you have trouble finding the right team by Sunday night, please let me know by Monday morning, so that I can help to arrange the team for you on Monday.

2. GitHub Personal Account

Everyone needs to have a GitHub (https://github.com/) account.

Please sign up the account (free tier) if you do not have one. Once you got the GitHub account, please go through the following GitHub official tutorials (https://help.github.com/) and install Git in your machine. You can also google tons of tutorials and videos about how to use Git and GitHub. If you have never used Git before, it would be super helpful if you can watch some tutorials and do some exercises. One good interactive guide is: https://try.github.io And a series of good Git video tutorials can be found at: https://www.youtube.com/watch?v=r63f51ce84A

3. Team Name

Please discuss with your teammates and decide a cool name to represent your team.

4. Team GitHub Organization Account

One of your team members should use his or her GitHub account to create a GitHub organization with your team name. (https://github.com/blog/674-introducing-organizations)

Then, you need to add all your teammates' GitHub accounts to this organization with the admin permission. Also, please add me to your organization as well. My GitHub ID is: sunyu912

Submission

Once you finish all the 4 assignments, please fill the following Google Form:
(every team member needs to submit it individually)
